

A scatter plot showing two classes of data points (red and blue) distributed in a 2D space. The x-axis ranges from 0 to 25, and the y-axis ranges from 0 to 10. The red points are concentrated in the lower-left and lower-right regions, while the blue points are concentrated in the upper-left and upper-right regions. There is a significant overlap between the two classes in the central region, indicating a non-linear decision boundary.
